Front End: Javascript, React, HTML5, CSS3, Jquery, SASS, Flexbox, CSS Grid, Bootstrap, Wordpress, Webpack, ES6
Back End: Node.js, Express, MongoDB, Firebase, Nginx, Python, Flask, OAuth
Other Relevant Skills: Git/Github, React Native

Web Development Experience

Freelance Web Developer | *Self-employed* | *December 2017- Current*
As a freelancer, I have worked on projects for a variety of musicians, artists, and small businesses.

General Assembly - Web Development Immersive
12 week full-time program focused on web development tools and best practices.

Projects

Wet & Wild Camp https://register.wetwildcamp.com/
 I recently finished building a full-stack registration system for a local summer camp. This app consists of a React front end communicating with a Node/Express server, all pulling from a MongoDB database; features I worked on include custom authentication, client and server side data validation, and PayPal integration. I worked on this project with one other developer, and we split up the work across the full stack fairly evenly.

Pete's Pedals: https://www.petespedals.net/
I built this site for a client's guitar pedal business using React and the Contentful CMS. I wanted them to be able to determine the site's content without having to navigate the codebase, and I did not want to be tied into the layouts of a more traditional CMS.

Bogbody Band Website: https://www.bogbody.band/
This is a website built for one of the bands I play with in Austin. I wanted to make a simple, elegant site that served as a hub for information and media related to the band. I used Webpack as a module bundler, along with Babel and Sass.
